

BRIAR-4

Core attachment map

Cyan = specified pivot/bone guide. Artwork = exact rectangular crops from BRIAR-1.

EAR_L

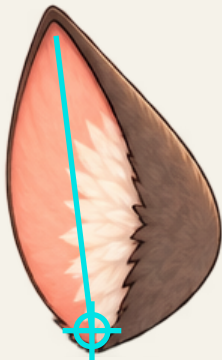

BRIAR-1 [264,12,427,249)

P local: (90, 218)

E local: (113, 24)

Ear base; keep printed side.

EAR_R

BRIAR-1 [493,12,646,249)

P local: (64, 220)

E local: (40, 23)

Ear base; keep printed side.

HEAD_BASE

BRIAR-1 [652,9,944,241)

P local: (146, 211)

E local: (146, 66)

Neck attachment.

MUZZLE

BRIAR-1 [987,91,1226,224)

P local: (119, 74)

Contains nose and closed mouth; composite mode only.

NECK_FUR

BRIAR-1 [1235,51,1517,234)

P local: (141, 45)

Contains scarf: do not add SCARF_* on top.

TORSO_FRONT

BRIAR-1 [108,280,404,536)

P local: (149, 199)

E local: (149, 28)

Paws already baked into torso.

TORSO_BACK

BRIAR-1 [512,280,793,536)

P local: (140, 199)

E local: (140, 28)

Alternative torso view.

TORSO_SIDE_L

BRIAR-1 [852,280,1110,536)

P local: (149, 203)

E local: (70, 42)

Paw already baked into silhouette.

TORSO_SIDE_R

BRIAR-1 [1186,280,1435,536)

P local: (136, 203)

E local: (71, 42)

Alternative torso view.

P = pivot; E = bone end. Both are crop-local px. Source position = crop origin + local point. No finished rest pose is implied.

SPECIFICATION ONLY | Original pixels preserved | No replacement artwork or new controls

BRIAR-4

Limb and tail origins

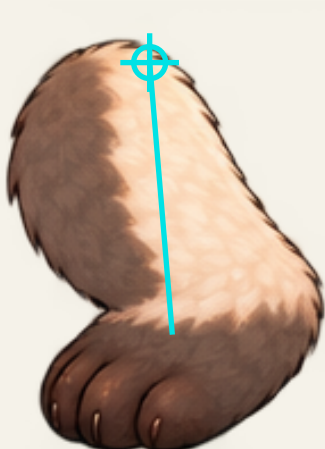

Exact cropped silhouettes; guides do not authorize stacking baked paws or silently renaming duplicate labels.

ARM_UPPER_L

P (92, 29)
E (75, 126)
crop 10,568

ARM_LOWER_L

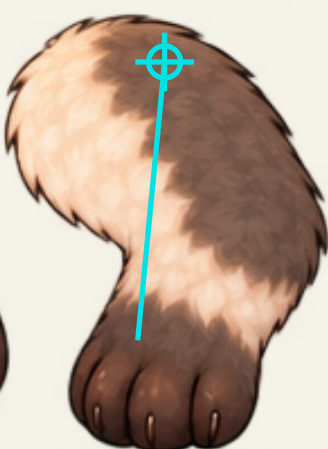

P (67, 27)
E (77, 147)
crop 169,570

ARM_UPPER_L

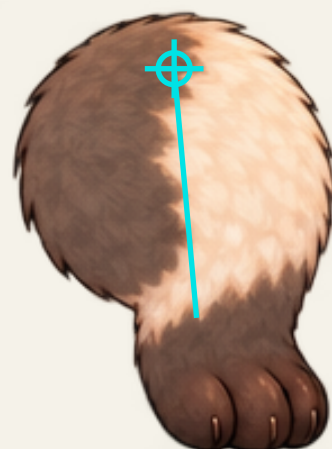

P (73, 27)
E (82, 132)
crop 323,568

ARM_LOWER_R

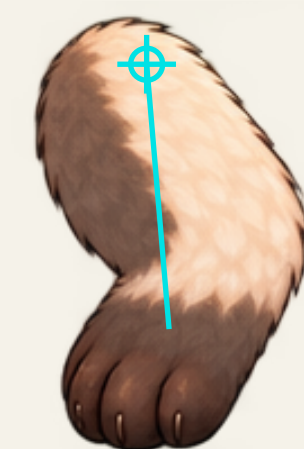

P (78, 27)
E (66, 151)
crop 485,568

LEG_UPPER_L

P (82, 30)
E (92, 141)
crop 709,568

LEG_LOWER_L

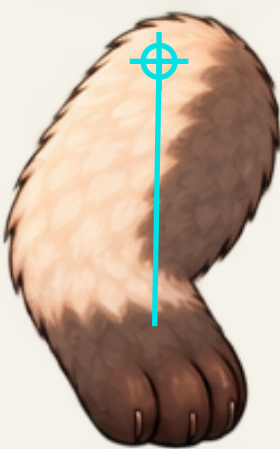

P (60, 28)
E (70, 146)
crop 884,568

LEG_UPPER_R

P (106, 29)
E (112, 142)
crop 1035,568

LEG_LOWER_R

P (79, 28)
E (77, 146)
crop 1227,568

TAIL_BASE

P (162, 82)
E (25, 82)
crop 12,807

TAIL_1

P (137, 82)
E (15, 82)
crop 205,807

TAIL_2

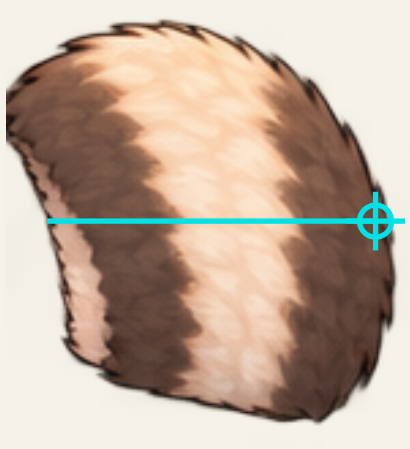

P (136, 82)
E (15, 82)
crop 355,807

TAIL_3

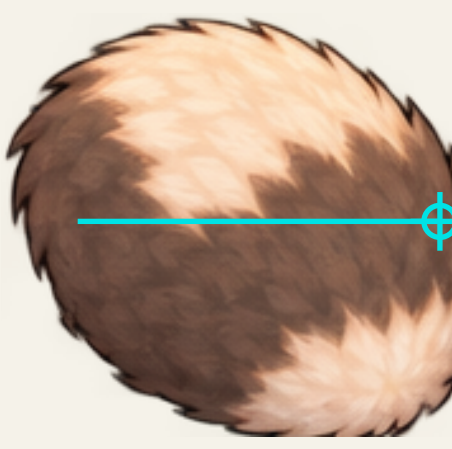

P (136, 82)
E (15, 82)
crop 502,807

TAIL_4

P (136, 82)
E (15, 82)
crop 649,807

TAIL_5

P (173, 82)
E (30, 82)
crop 797,807

Limb chains: ARM_UPPER_L (first occurrence) > ARM_LOWER_L > PAW_FRONT_L; LEG_UPPER_L > LEG_LOWER_L > PAW_BACK_L; LEG_UPPER_R > LEG_LOWER_R > PAW_BACK_R. The right arm is unresolved because the second upper-arm label repeats L.

Tail chain: active TORSO_* > TAIL_BASE > TAIL_1 > TAIL_2 > TAIL_3 > TAIL_4 > TAIL_5. Register each child P to its parent E. Right-edge origins specify a left-extending chain; seam fit is unverified. Do not stretch, mirror or repaint to hide a mismatch.

BRIAR-4

Hierarchy / stacking / motion

Structural bone roles use existing asset names. The artboard is the root; no additional UI controls are specified.

PARENT > CHILD

artboard	one active TORSO_FRONT / BACK / SIDE_L / SIDE_R
active TORSO_*	HEAD_BASE, NECK_FUR, valid limb roots, TAIL_BASE
HEAD_BASE	EAR_L, EAR_R; eye, brow, muzzle/face layers; one hat
EYE_BASE_L / R	matching IRIS_L / R; matching lid variants
IRIS_L / R	matching highlight variant; PUPIL_* only if isolated
HEAD_BASE	one MUZZLE or one complete MOUTH_* composite
active PACK_*	STRAP, TAG only if not already baked into pack
existing selected paw	one contacted prop; no prop assigned by guesswork

BACK TO FRONT / FRONT VIEW

TAIL chain > PACK_* rear attachment > far limbs > active torso > near limbs > NECK_FUR or selected scarf > ears > HEAD_BASE > EYE_BASE > IRIS > selected highlights > lids > selected muzzle/mouth > brows > blush/freckles/whiskers > selected hat. Handheld prop depth follows its actual grip.

CONSERVATIVE STARTING LIMITS

Angles are deltas from the fitted rest orientation, not source measurements. Positive = clockwise in this specification.
HEAD_BASE: -10 to +10 degrees.
EAR_L / EAR_R: -12 to +12 degrees.
Each tail link: -8 to +8 degrees.
Limbs: locked until silhouette and seam fit pass. Then test +/-5 degrees before wider motion.
Paws and rigid accessories: inherit parent; no independent rotation initially.
No IK targets, physics, joysticks, new state-machine inputs or invented expression controls.

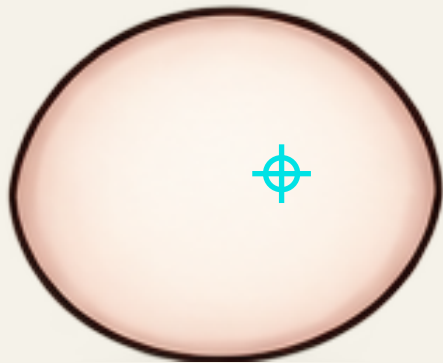

Local-space limits only. Keep child scale at 1,1; do not scale the same part in both bone and artwork.

A bone can move an image by parenting it. Mesh deformation is not specified: no mesh, weights or joint geometry is present in the sources. View changes require a fitted registration per view. Do not flip L/R or interpolate torso variants as if they were a 3D turn.

BRIAR-4 Face registration / exclusivity

Exact printed names are expanded in the manifest. BRIAR-2 is the authoritative face source for this handoff.

EYE_BASE_L

local P (103, 66)

IRIS_L

local P (67, 51)

MOUTH_CLOSED

local P (79, 42)

BROW_NEUTRAL_L

local P (62, 39)

REGISTER TO THE EXISTING HEAD

HEAD_BASE crop is [652,9,944,241). Its local dimensions are 292 x 232 px. Proposed eye-center attachment guides: printed L at (91,124), printed R at (201,124). Proposed muzzle-center guide: (146,182). These are new registration recommendations, not recovered pose data.

For each EYE_BASE_*, place its crop-center P at the corresponding head guide. Center IRIS_* within its eye. Keep gaze centered until a silhouette clip exists. Align lids to the fitted eye boundary, not to their different crop-box centers. Brow placement must be fitted visually above that boundary; no invented brow offset is authoritative.

ONE VISIBLE OPTION PER FAMILY

Upper lids: OPEN / HALF / CLOSED, separately for L and R. Lower lids: OPEN / RAISED / CLOSED, separately for L and R. Brows: NEUTRAL / CURIOUS / HAPPY / SAD / ANGRY / SURPRISED, separately for L and R. Nose: DEFAULT / LEFT / RIGHT / DOWN only where the nose is isolated.

MUZZLE and complete MOUTH_* crops already include a nose and mouth. Choose one composite; do not layer extra NOSE_*, MOUTH_INNER_*, TEETH_*, FANG_* or TONGUE_* over painted duplicates. HIGHLIGHT_* contains four circles: size options, not four simultaneous lights. Use one existing circle. BRIAR-2 face detail duplicates in BRIAR-3 stay unused.

BRIAR-4 Accessories / props / source bindings

BRIAR-3 source labels stay literal. Parent rules specify attachment intent; contact registration must be fitted.

SCARF_FRONT

P (67, 24)

PACK_FRONT

P (65, 22)

STRAP

P (40, 15)

TAG

P (53, 20)

MAGNIFIER

P (42, 73)

NO_HAT

P (68, 119)

ATTACHMENT RULES

SCARF_FRONT / BACK / SIDE_L / SIDE_R: match the active torso view; torso parenting keeps the scarf at the neck. SCARF_TIE_L / R and SCARF_FLOWER only if the selected scarf lacks those painted details. NECK_FUR already includes a scarf; use one neck solution.

PACK_FRONT / SIDE_L / SIDE_R / OPEN: one active complete pack view/state. Attach pack to the active torso; do not stack different view crops. STRAP P is at its upper end; TAG P is at its loop. Guides specify attachment intent; fit the actual contact to the selected pack before animation.

LEAF_CROWN / FLOWER_CROWN / BIG_LEAF_HAT / ACORN_HAT / NO_HAT: one selection, parent HEAD_BASE. NO_HAT contains foliage; do not use it as an invisible off-state. Hat origin = crop-bottom center until its contact line is fitted.

STICK / LEAF / ACORN / FLOWER / MAGNIFIER / MAP / LANTERN: parent to a selected existing paw only after fitting the grip. Preserve source artwork; MAP contains two map drawings in one labeled cell. Pick one source drawing; no combined two-map prop or invented grip control.

Environment pieces stay at artboard level. FX have no default bone/control assignment. OUSCOVERY_GLOW is the literal printed label. The blue-puff label at source x=999 has an unreadable first character; leave its name unresolved. The manifest uses source locators to distinguish repeated labels.

No generated pixels. No new poses. No fictional asset names. Unresolved source data stays unresolved.

NAMING AND EXTRACTION EXCEPTIONS

BRIAR-1: ARM_UPPER_L is printed at crop x=10 and again at x=323. Do not rename the second to ARM_UPPER_R. The limb at [1378,568,1534,770) and paw at [1419,821,1534,972) have no labels. Use locators for discussion only; exclude them from the named hierarchy.

BRIAR-1b: unlabeled alternate body, tail and limb silhouettes. It supplies no authoritative names, hierarchy or joint coordinates. Keep it as source reference; no invented mapping to BRIAR-1. wild-find-sprite-1.png is a look/proportion reference, not a replacement artwork source.

All four production PNGs contain transparency (alpha range 0 to 254). Rectangular crops retain original RGBA pixels, including any nearby atlas fragments and source edge artifacts. Crop files are provenance/reference tiles, not certified isolated imports. No background removal, body segmentation or hidden-joint reconstruction was performed.

IMPLEMENTATION SEQUENCE / REPEATABLE ACCEPTANCE CHECKS

1. Read the manifest first. Resolve duplicate/unnamed identities before using the affected chains.
2. Check source alpha and crop edges; exclude neighboring atlas fragments with a source-faithful clip.
3. Register one existing torso view and the head; preserve the approved reference proportions.
4. Set crop-local pivots from the guide. Fit parent-child contacts; do not infer a finished rest pose.
5. Enable only layers that do not duplicate baked paws, scarves, pupils, mouths or props.
6. For each enabled chain, rotate one joint through its limit range; inspect seam gaps and occlusion.
7. Verify one option per face/hat/pack family; inspect open and closed lids for exposed backgrounds.
8. Confirm all art layers trace to a source rectangle. No extra artwork, controls or invented names.

Delivery: six reference sheets + lossless crop pack + machine-readable manifest. This is not a finished .riv file.
